

# The Fifth Generation Of AI Smart Parking Solution

Diamond Label SI Provider

## The AI Smart Parking Solution's scope of application includes:

**Indoor Parking Lots**  
(Enterprise, Community,  
Campus, Commercial)

**Outdoor Parking Lots**  
(Enterprise, Campus,  
Commercial)

**Parking Buildings**  
(Government Agencies,  
Enterprises, College Campuses)

## The advantages of cooperating with us using the AI Smart Parking solution:

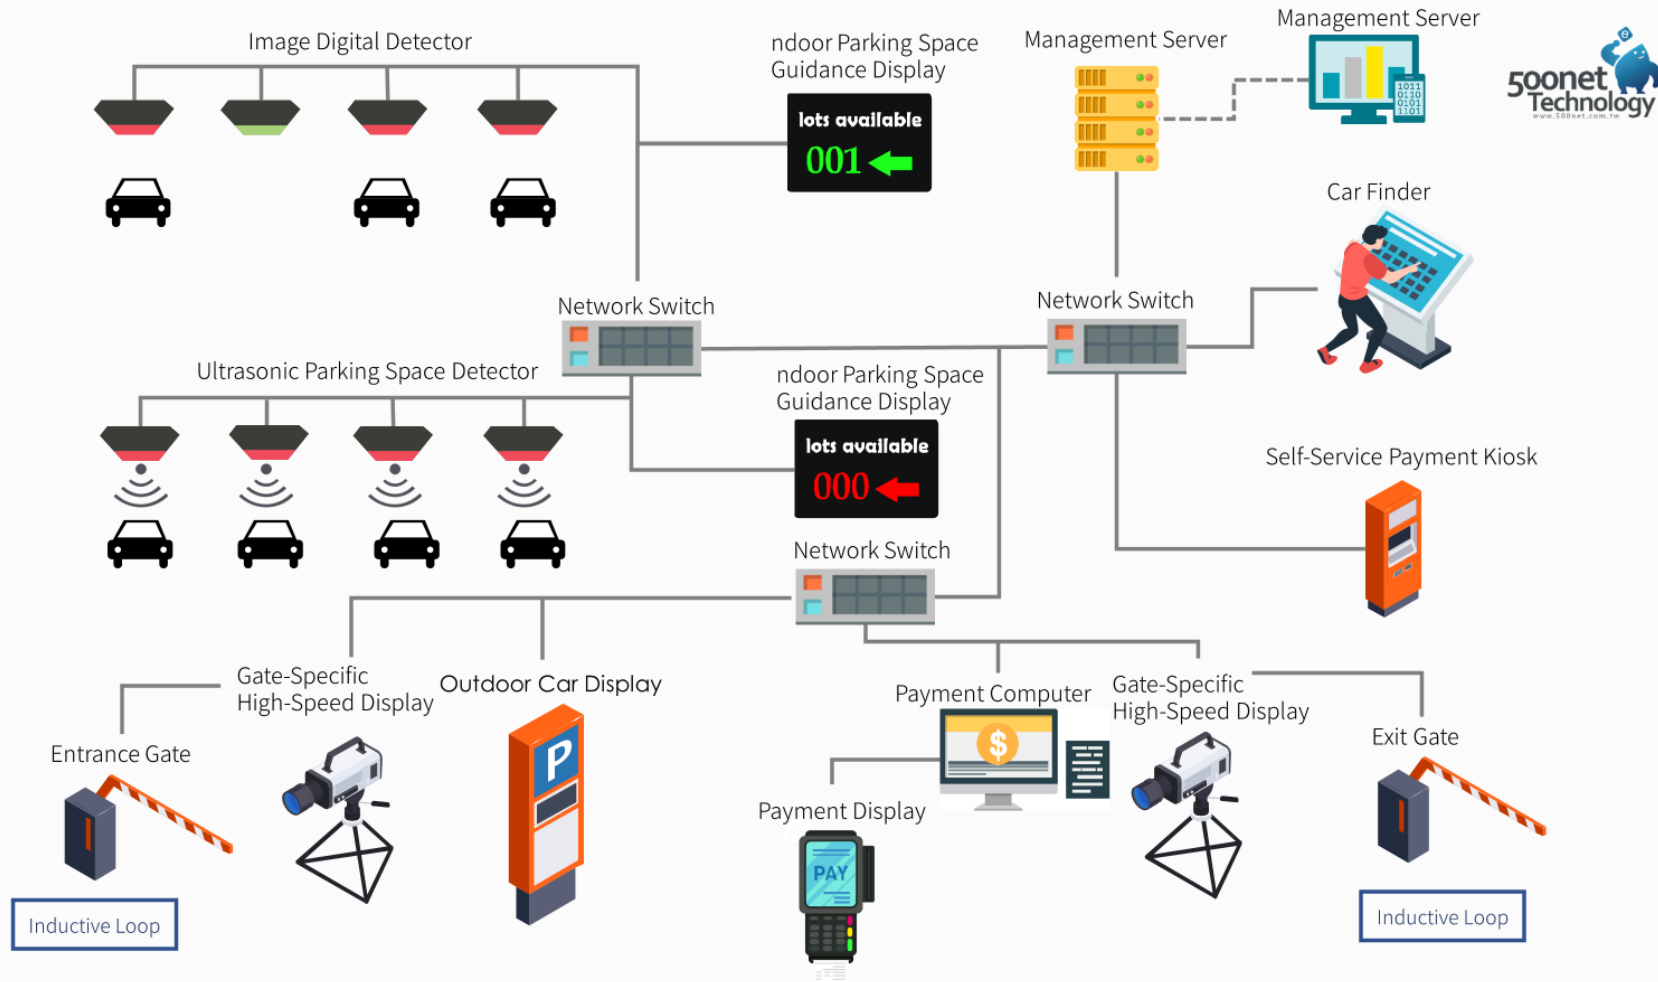

1. The product surpasses industry standards (5-year warranty TSMC standard)
2. Unmanned AI management system (path guidance, automatic recovery, cloud maintenance, technological enforcement, smart car searching, privacy masking)
3. Integrated cloud energy platform OCPP2.01+ energy consumption management

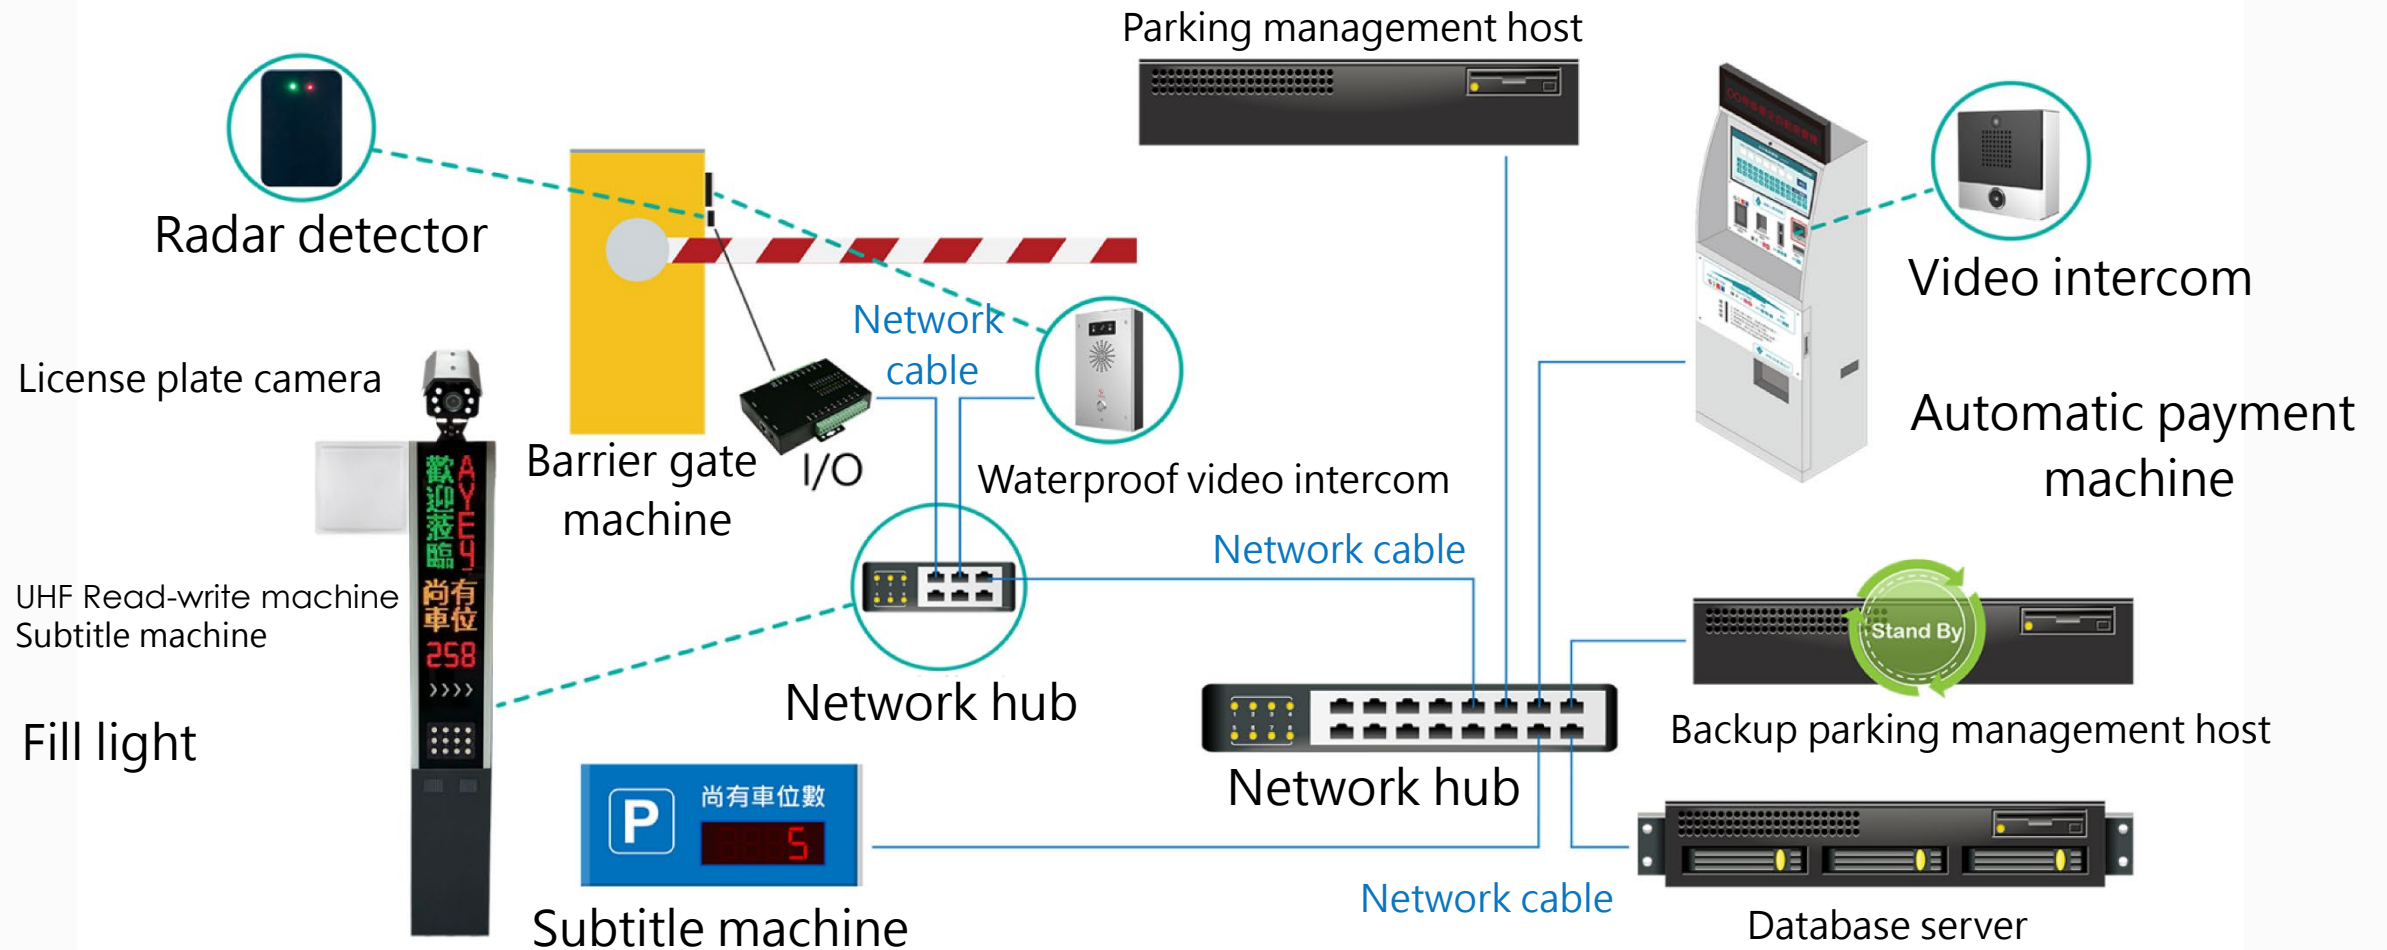

# AI Smart Parking Solution - One-Stop Service

# The architecture of the AI Smart Parking Solution includes:

# The deployment architecture of the AI Smart Parking Solution includes:

## The product features of the AI Smart Parking Solution include:

1. Entrance and exit license plate recognition (vehicle information recording, license plate correction, whitelist management, blacklist management).
2. Management of occupied parking spaces (area management: electric, parent-child, disabled, heavy machinery, etc.).
3. LED area guidance indicator system.
4. Smart parking management system.
5. Parking lot technology enforcement system.
6. Parking lot security monitoring system.
7. Parking lot energy saving and environmental control system.
8. Smart touch screen car finding system (with image preview).
9. Fully automatic multi-payment system payment machine (including online payment system, temporary parking, monthly parking, long-term parking permit).
10. Parking central control system (authorization management, zone management, alarm handling, remote assistance).
11. Report management (data query, statistical reports).
12. Mobile app.

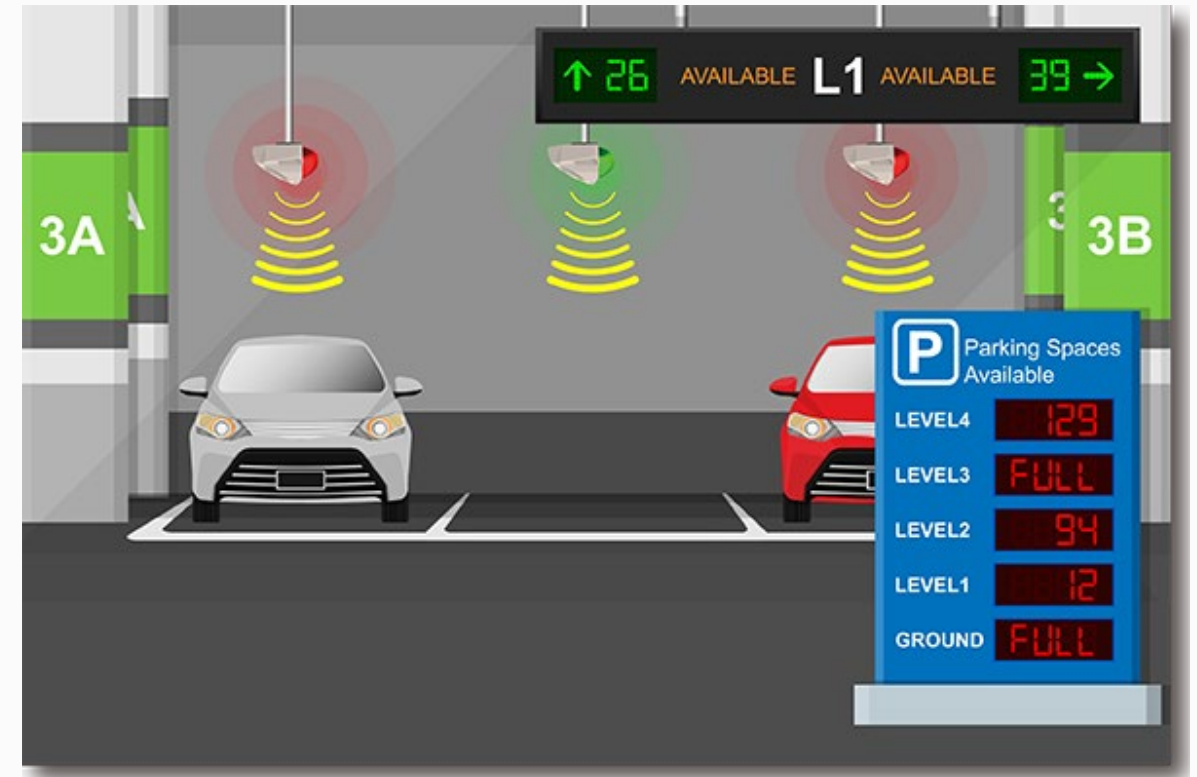

# AI Smart Parking Solution: Entrance and Exit License Plate Recognition

1. Regardless of whether it's a community parking lot, campus parking lot, enterprise parking lot, or commercial parking lot, license plate recognition can be used for access management.
2. Vehicles registered with a parking permit will be added to the whitelist. When the system recognizes an approved vehicle (car, motorcycle), it automatically activates the barrier for entry.
3. For temporary parking (temporary entry), the system starts recording the entry time when the vehicle enters. If the vehicle exits after the free exit time, it must pay the corresponding parking fee.

# AI Smart Parking Solution: Occupied Parking Space Management

1. With our ultrasonic occupancy detection system, vehicles owners simply can monitor the status of parking space anytime upon entry.
2. After entry, the LED signs will guide vehicles owners to the available parking spaces through the shortest route.
3. Parking spaces can be categorized into different colors. For example, "green" is referred to standard parking space, whereas "blue" is for the disabled, pink means the parent-child space, and white is for electric vehicles.

# AI Smart Parking Solution: LED Area Guidance Indicator System

1. From the moment of entry, the system records the vehicle's entry and exit, and combines it with the current number of available parking spaces for comprehensive management
2. Upon entry, drivers can grasp the basic parking space conditions of each floor and area.
3. After entry, drivers can check the current parking space status of each area at major intersections and floor entrances, making it easier to find parking spaces

# AI Smart Parking Solution: Intelligent Parking Management System

1. According to the customer's attributes, different versions of the parking management system are planned (enterprise, campus, community, commercial, etc.).
2. Customers can implement our existing standard systems according to their actual needs.
3. Custom development is also available based on the customer's specific requirements.
4. The system adopts a Responsive Web Design (RWD) mode, allowing synchronization of management between mobile phones and computers.

# AI Smart Parking Solution: Parking Lot Technology Enforcement System

We have implemented various parking safety management systems in the parking lot to ensure the safety of pedestrians and vehicles, including:

- A. Speed monitoring  
(overspeed warning)
- B. Reverse warning
- C. Illegal parking detection  
(warning for parking in non-parking areas)
- D. Misplacement warning  
(e.g., occupying an electric vehicle charging spot)

# AI Smart Parking Solution: Parking Lot Security Monitoring System

1. We have installed AI-enabled cameras and management hosts in the parking lot to assist in comprehensive security monitoring, ensuring safety within the premises. This includes:
  - A. Pedestrian-vehicle conflict detection (warning lights alert)
  - B. Electronic fence (intrusion alarm)
  - C. Loitering detection (tracking and identification)

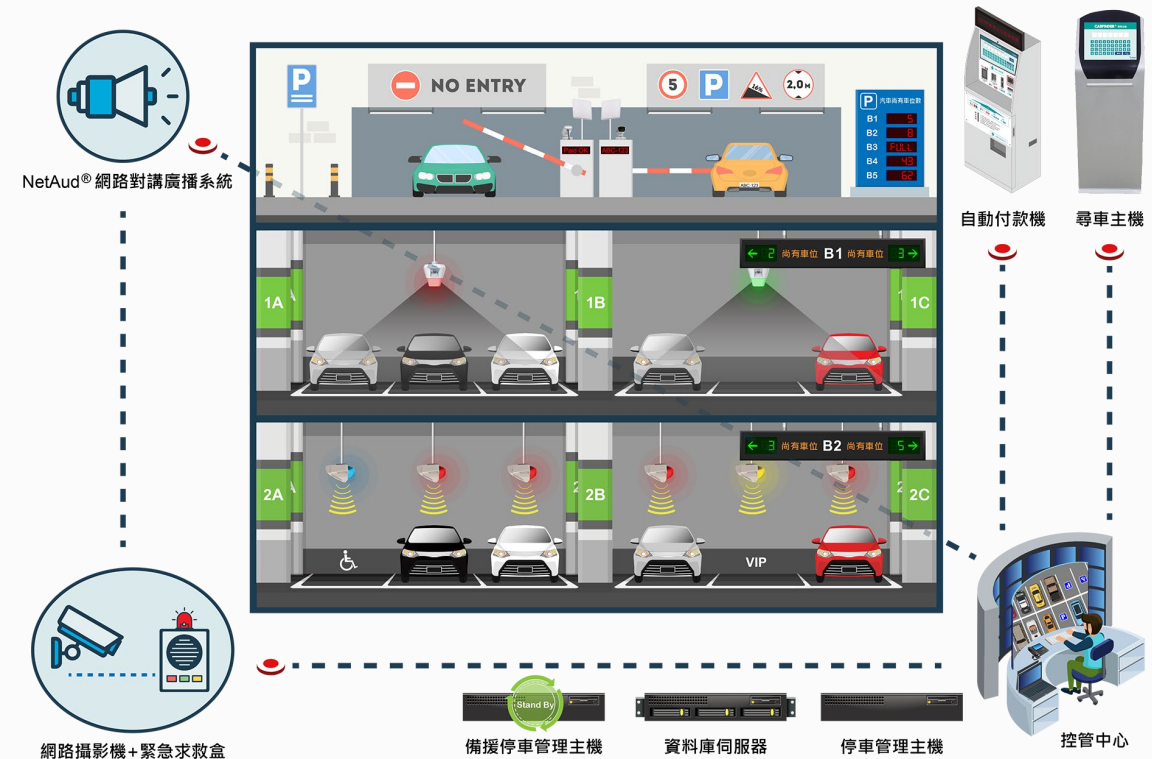

# AI Smart Parking Solution: Parking Lot Environmental Control and Energy Saving System

1. Based on ESG environmental principles, we have also introduced energy-saving and environmental control devices into the parking lot, including:
  - A. Lights turn off automatically in occupied parking spaces
  - B. Automatically reduce light brightness by 50% in areas without vehicles or pedestrians for an extended period
  - C. When carbon dioxide levels are high, ventilation facilities are automatically activated to maintain air quality within the premises

# AI Smart Parking Solution: Intelligent Touchscreen vehicles Locating System

1. The system provides car owners with an interactive touchscreen car finding kiosk on-site, enabling them to locate their parked vehicles easily.
2. Additionally, the system records the vehicle's license plate and parking area through parking space cameras, uploading the information to the management system.
3. The car finding kiosks are strategically placed near payment machines (one on each floor if the facility has multiple levels).
4. Furthermore, users can also access the car finding feature through their mobile phones (web/app).

# The AI Smart Parking Solution includes a comprehensive automated multi-payment system

1. Integrating cash, EasyCard, credit cards, and other commonly used online payment methods
2. consumers have the flexibility to choose between payment options via payment machines or scanning QR codes for online payments
3. This approach reduces wait times for vehicle owners queuing at payment machines, enhancing overall efficiency

## The AI Smart Parking Solution includes The Parking Central Control System

1. We integrate all parking facility equipment (P5 system architecture and P6 wiring architecture) into the Central Control System mainframe through edge computing and network connectivity.
2. The Central Control System comprises management systems, redundancy systems, databases, etc.
3. It allows real-time monitoring of traffic flow, zone management, system load status, hardware fault detection, etc

# AI Parking Central Control System: Parking Lot Traffic Monitoring and Management

# AI Parking Central Control System: Parking Area Management

The screenshot displays a web-based interface for parking area management. On the left, there is a vertical sidebar with icons for a map, an envelope, a speedometer, and a camera. The main content area is titled "Parking area management" and features a table with the following data:

停車區域	停格格數	目前停車數	Action
A 區	17	17	修改資料
B 區	158	126	修改資料
C 區	113	0	修改資料
D 區	13	13	修改資料
E 區	147	135	修改資料
Total	448	343	修改資料
五虎崗1樓	427	427	修改資料
五虎崗2樓	776	330	修改資料
大忠街	350	341	修改資料

At the top of the table, there is a "Show 25 entries" dropdown and a search box.

# AI Parking Central Control System: Vehicle Occupancy Detection and Management

● Reservation ● Available ● Occupied ● Disabled ● Parent-child ○ Electric vehicle

# Monitoring Detection Adequacy System - Inspection Items

Spending a large budget on installing cameras, only to find out that when incidents occur, there's no footage captured?

Camera signal abnormal!

Camera signal abnormal!

Camera lens dirty, causing unclear footage!

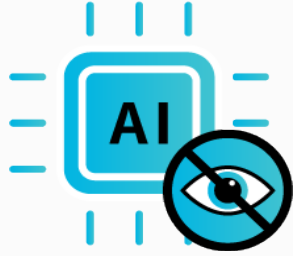

Storage damaged. Images not retained!

## Inspection items

- Camera disconnected
- Camera black screen
- Screen flickering (noise)
- Screen obscured (by foliage, honeycomb...)

- Camera intentionally moved
- Video storage abnormal
- Specific area abnormal (e.g., masking of infrared detector)

# Monitoring Adequacy Detection System - Functional Features

Replace human eyes with AI,  
Instant alerting and reporting  
without omission

Ensure site security, reduce occupational  
accidents, and provide sufficient  
evidence in the event of an accident

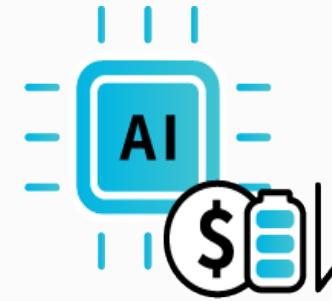

Proactively monitor and generate  
automatic reports compliant with ISO  
standards

Support remote connection for  
updates and status viewing, reducing  
the need for on-site manpower.

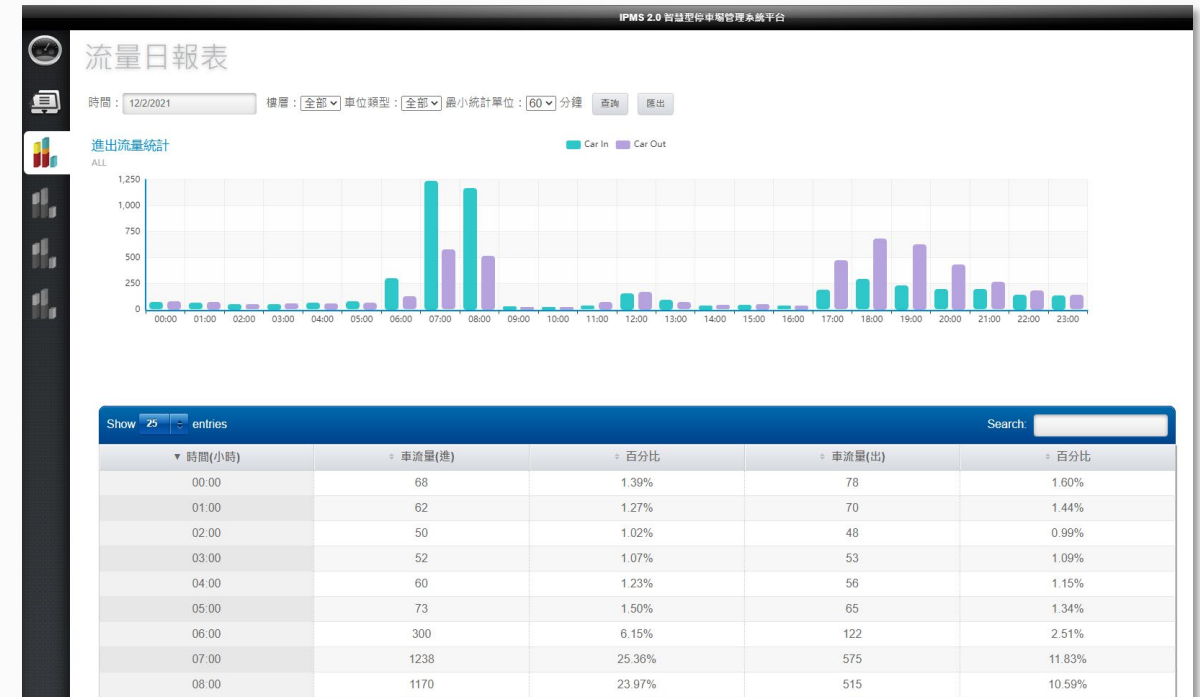

Maintain independent operation  
in case of network interruption,  
increasing system reliability.

Affordable high-tech with low-cost,  
low-power AI acceleration

# AI Smart Parking Solution: Report Management

1. All parking lot data records can be presented and analyzed through visualized reports, allowing managers to have a clear overview.
2. Parking traffic report (daily/monthly/quarterly/yearly)
3. Parking space utilization report
4. Charging pile usage and revenue management report
5. Revenue management report (regular/temporary parking)
6. The system adopts a Responsive Web Design (RWD) mode, allowing synchronization of login and management between mobile phones and computers.

# AI Smart Parking Solution: Mobile App

1. Car owners can use the mobile app to check the current availability of parking spaces in the parking lot
2. Find parking spaces via the mobile app
3. Handle parking permit renewal
4. Apply for temporary visitor parking spaces
5. Make online payments for parking
6. Reserve parking spaces (e.g., electric car owners can reserve charging spaces)
